

ATTENTION ALL BOATERS!

WATCH FOR NETS

We will be conducting a lake trout research survey in the Upper Harbor (near the green can) and north of Partridge Island during the time period from 01 October to 05 December 2007.

We will be using bottom gill nets that stand 6 feet tall off the bottom and the nets will be 1,400 feet long. These nets will have a DNR buoy with **BLACK** flags on each end of the net.

We will be recording biological data from fish we catch and will tag them with small colored tags and release them. The objective is to study movement patterns of lake trout in Lake Superior. If you should capture a fish with a tag, please call the MIDNR with the tag number off of the tag and the date and location that you caught the fish. Some of the tags have a reward. We will provide you information that we have on the tagged fish.

Thank you for your cooperation.

Should you have any questions, please call:
Marquette Fisheries Research Station, MIDNR
